

School of Computer Science and Artificial Intelligence

Lab Assignment # 24

Name of Student : Bathini Sai Rithvik  
Enrollment No. : 2303A51536  
Batch No. : 22

**Task 1 – Environment Setup**

- Create a free Replit account.
- Explore the mobile app development templates (React Native / Flutter / HTML5 hybrid).
- Install required packages or dependencies in the Replit environment.

**Prompt:**

Develop templates like React Native, Flutter, and HTML5. After selecting a suitable template, I set up the workspace and installed the required packages. This step helped me understand how the development environment works. It also ensured that everything was ready before starting the actual app development.

**Output:**

## Task 2 – Basic Mobile App

- Build a simple "Hello App" that displays:
  - o App Title
  - o User's Name (input field + button)
  - o Greeting message dynamically updated.
- Use AI assistance to generate boilerplate code and explain structure.

### Prompt:

Develop a simple “Hello App” that displays the app title along with an input field for the user’s name. A button was added to generate a greeting message dynamically based on the input. This task helped me understand how user input works and how data can be displayed in real time. The structure of the app was kept simple for better clarity.

### Output:

## Task 3 – Adding Features with AI Assistance

- Enhance the app with:
  - o Navigation bar (Home, About, Contact).
  - o Form handling (e.g., user registration page).
  - o Basic styling with CSS or React Native styles.
- Ask AI in Replit to add inline documentation for each function.

### Prompt:

Enhance the app by adding a navigation bar with pages like Home, About, and Contact. I also created a basic user registration form with simple validation. To improve the appearance, I applied basic styling to the app. Additionally, I included inline comments in the code to make it easier to understand each function.

# OurMission

We believe that life is better when we're connected. ConnectHub was built to break down the barriers of digital isolation and bring people together in meaningful, energizing ways.

## The Story

It started in a small coffee shop. A group of strangers realizing they all shared the same passions, but had no easy way to find each other in their own city. The digital world was vast, yet it felt incredibly lonely.

We created ConnectHub to be the digital equivalent of that coffee shop — a welcoming space where everyone knows your name, where ideas flow freely, and where community is the default state, not an afterthought.

## Our Values

### Community First

Every feature we build is designed to foster authentic human connection.

### Radical Warmth

We design our spaces to feel inviting, safe, and inherently positive.

### Safe Spaces

We prioritize moderation, respect, and ensuring everyone feels heard.

## Registration Page:

The screenshot shows a web application for 'ConnectHub'. The header includes the logo, navigation links (Home, About, Contact), and a 'Join the Community' button. The main content area features a 'Join the Community' form with the following fields: Full Name (Jane Doe), Email Address (jane@example.com), Password (masked with dots), and Confirm Password (masked with dots). A 'Create Account' button is at the bottom of the form. The footer contains the copyright notice '© 2026 ConnectHub. Connecting communities everywhere.' and a 'Made with Replit' badge.

## Task 4 – Testing on Mobile

- Run the app in Replit’s mobile preview mode.
- Test responsiveness on different screen sizes.
- Fix UI alignment issues with AI suggestions.

### Prompt:

Building the features, I tested the app using Replit’s mobile preview mode. I checked how the app looked on different screen sizes and made sure all elements were properly aligned. Some minor UI issues were identified and fixed with the help of AI suggestions. This step ensured that the app runs smoothly on mobile devices.

## Task 5 – Deployment

- Deploy the app using Replit hosting or export it to a mobile framework (like Expo for React Native).
- Share the deployment link with peers for testing.

### Expected Outcomes:

- Students will understand how to use Replit for mobile app development.
- Ability to build a basic functional mobile app with UI, navigation, and user interaction.
- Experience in AI-assisted coding, debugging, and documentation for mobile applications.

### Prompt:

Deploy the application using Replit hosting and generated a shareable link. After deployment, I tested the app again to confirm that all features were working correctly. I then shared the link with others to gather feedback. This step gave me a complete understanding of how to make an app accessible online.
